

PROJECT NAME: **Deploy a Prototype Webapp of a Bank Login Page Using Docker**

In this project am created one VS consol app project and in this I am created one class the name is Bank.cs in this class am write the code here after that I am called this method in to the Program.cs class.

After that I am created one Publish with folder. After that am opened the Terminal Developer command prompt by using the following commands I am pushed this one into the DOCKER.

```
>docker build -t banking-img -f "Path"
```

```
>docker images
```

```
>docker run -it --rm banking-image
```

After that I am created one GIT Repository to push this code into the GIT HUB. By using the following commands

```
git init
```

```
git add .
```

```
git status
```

```
git commit -m "first"
```

```
git repository
```

```
git push -u origin master
```

Finally the given project was success fully completed.
